## Key Academic Projects

-  **Event recognition in complex videos using multi stream CNNs**  
Explored fusion techniques for the spatial (static frames) and temporal (stacked optical flow) streams from a CNN as proposed in the two-stream CNN paper by Simonyan et al. Also modeled temporal information in videos using LSTMs.
-  **Understanding the role of context in object recognition**  
Used a conditional random field to model geometric, semantic and spatial context to improve object recognition as done by Rabinovich et al. Also evaluated GIST for global, scene-level priming.
